PROFESSIONAL SUMMARY

Full Stack Engineer with 3 years building production systems end to end, from database schema to deployed UI. Founder of Artitek, where I designed and operate three systems that build on each other: a multi-tenant SaaS platform for condominium administration, a payment gateway integrated with Venezuelan banking APIs, and an LLM document extraction microservice (177,000 lines and 3,800 automated tests).

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go (Golang), SQL · **Frontend:** React, Next.js, Tailwind CSS, React Query · **Backend:** Node.js, Bun, Hono, Fiber, Ruby on Rails, REST APIs, microservices, tRPC · **Data:** PostgreSQL, Drizzle ORM, schema design and migrations · **Infrastructure:** Docker, CI/CD, GitHub Actions, mTLS, OAuth, Firebase Auth · **Practices:** TDD, unit and integration testing, hexagonal architecture, monorepos, Git, Agile · **AI:** Claude Code and agent-assisted development, LLM integration and evaluation

PROFESSIONAL EXPERIENCE

Founder & Full Stack Engineer — Artitek · artitek.dev

2026 – Present · Caracas, Venezuela (remote)

- Founded a custom software consultancy and took La Torre from architecture to its first paying client in six months; I operate all three systems in production, including the relationship with the bank.
- Use Claude Code daily as part of the workflow (per-repository conventions, custom skills, assisted code review): it is what makes sustaining three production systems with TDD and no team viable.

Full Stack Engineer — Kompil · kompil.com

Nov 2025 – Present

- Own features end to end on a production vehicle sales platform, in a TypeScript monorepo (Turborepo) with Next.js, tRPC, and PostgreSQL.
- Led a full product redesign, rebuilding the interface without interrupting service for existing users.

Full Stack Engineer — GMA Desarrollo

Apr 2024 – Jul 2025

- Responsible for an entire automotive marketplace (data model, backend, product) and for its migration from Ruby on Rails to Next.js, rebuilding the frontend and API layer.

Full Stack Engineer — Eddu · eddu.app

Aug 2023 – Sep 2024

- Built and maintained an educational platform in production end to end, from database design through the full frontend.

SELECTED PROJECTS

La Torre — SaaS platform for condominium administration · latorreapp.com

TypeScript · Next.js 15 · Hono on Bun · PostgreSQL · Drizzle ORM · Turborepo · pg-boss

- Monorepo of 3 applications and 9 packages: 85 tables, 85 controllers, 323 services, and 2,900 tests, in a layered architecture with a typed ok/error result rather than exceptions.
- Assessment engine with pro-rating by aliquot, dual currency at the BCV rate, FIFO allocation of payments to charges, bank reconciliation, and pg-boss workers for overdue detection and reminders.
- Receipt reading from a photo: the resident uploads the image and the form fills itself in. The extractor takes bytes, not HTTP requests, so WhatsApp and email intake go through the same rules as the web.

Artitek Payments — multi-tenant payment gateway · artitekpayments.com

Go · Fiber · PostgreSQL · banking APIs (BNC) · mTLS

- 60,000 lines of Go and 740 tests across 30 domains in a hexagonal architecture, integrated with Venezuelan banking: C2P, SIMF instant debit, POS, transfers, reversals, hosted checkout.
- Per-tenant isolation, idempotency by external reference, signed webhooks with retries, a circuit breaker over the bank, consumer identity via mTLS, and card data redacted at the type level (OWASP ASVS L2).
- Reconciliation of the local ledger against the bank: one receipt pays one thing, one movement reconciles one payment.

Artitek Extraction — LLM document extraction microservice

Go · PostgreSQL · model evaluation against a golden set

- Multi-tenant service with an async API and signed webhooks, returning typed data with per-field confidence, never a verdict. An evaluation harness against a hand-labelled golden set compares models and cost per document, and the confidence threshold routes to human review before an amount reaches the ledger.

EDUCATION

B.Sc. Computer Engineering — Universidad Católica Andrés Bello (UCAB), Caracas · 2025
