PROFESSIONAL SUMMARY

Full Stack Engineer with 3 years building production systems end to end, from database schema to deployed UI. I work across TypeScript and Go, and I have shipped and operated multi-tenant SaaS, marketplaces, banking integrations and LLM services — with automated testing as a default rather than an afterthought.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go (Golang), SQL · **Frontend:** React, Next.js, Tailwind CSS, React Query · **Backend:** Node.js, Bun, Hono, Fiber, Ruby on Rails, REST APIs, microservices, tRPC · **Data:** PostgreSQL, Drizzle ORM, schema design and migrations · **Infrastructure:** Docker, CI/CD, GitHub Actions, mTLS, OAuth, Firebase Auth · **Practices:** TDD, unit and integration testing, hexagonal architecture, monorepos, Git, Agile · **AI:** LLM integration, model evaluation against labelled datasets, agent-assisted development

PROFESSIONAL EXPERIENCE

Full Stack Engineer — Kompil · kompil.com

Nov 2025 – Present

- Own features end to end on a production consignment marketplace for vehicles: the owner leaves the car with the platform, which sells it on their behalf and settles the proceeds minus commission.
- Model the vehicle lifecycle across consignment agreement, listing, reservation, sale and seller payout — each stage with its own state, permissions and money implications.
- Led a full product redesign, rebuilding the interface without interrupting service for existing users, in a TypeScript monorepo (Turborepo) with Next.js, tRPC and PostgreSQL.

Founder & Full Stack Engineer — Artitek · artitek.dev

2026 – Present · Caracas, Venezuela (remote)

- Independent software consultancy: sole engineer designing, building and operating the three production systems below, including the direct technical relationship with the bank behind the payment integration.
- Took the first of them from architecture to a paying client in six months, sustained end to end with TDD and CI.

Full Stack Engineer — GMA Desarrollo

Apr 2024 – Jul 2025 · Part-time

- Owned an automotive services marketplace end to end: workshop directory, quote requests and service contracting, from data model and backend to the user-facing product.
- Migrated the platform from Ruby on Rails to Next.js, rebuilding the frontend and the API layer without losing existing functionality.

Full Stack Engineer & Technical Lead — Eddu · eddu.app

Aug 2023 – Sep 2024

- Built and operated a cloud fee-collection and billing platform for academic institutions, from database design through the full frontend.

SELECTED PROJECTS

La Torre — multi-tenant SaaS for condominium administration · latorreapp.com

TypeScript · Next.js 15 · Hono on Bun · PostgreSQL · Drizzle ORM · Turborepo · pg-boss

- Assessment engine with pro-rating by aliquot, dual currency at the official rate, FIFO allocation of payments to charges and bank reconciliation, plus background workers for overdue detection, reminders and voting.
- Layered architecture across a monorepo of applications and shared packages, using a typed ok/error result instead of exceptions; 2,900 automated tests.
- Receipt reading from a photo: the resident uploads an image and the form fills itself in. The extractor takes bytes rather than HTTP requests, so WhatsApp and email intake go through the same rules as the web.

Artitek Payments — multi-tenant payment gateway · artitekpayments.com

Go · Fiber · PostgreSQL · banking APIs (BNC) · mTLS

- 30 domains in a hexagonal architecture integrated with Venezuelan banking: C2P, SIMF instant debit, POS, transfers, reversals and hosted checkout; 740 automated tests.
- Per-tenant isolation, idempotency by external reference, signed webhooks with retries, a circuit breaker over the bank, consumer identity via mTLS, and card data redacted at the type level (OWASP ASVS L2).
- Reconciliation of the local ledger against the bank: one receipt pays one thing, one movement reconciles one payment.

Artitek Extraction — LLM document extraction microservice

Go · PostgreSQL · model evaluation against a golden set

- Async API with signed webhooks returning typed data and per-field confidence, never a verdict; the confidence threshold routes to human review before an amount reaches the ledger.
- Evaluation harness against a hand-labelled golden set that compares models on accuracy and cost per document.

EDUCATION

B.Sc. Computer Engineering — Universidad Católica Andrés Bello (UCAB), Caracas · 2025
